**EAST RAND PROPRIETARY MINES LIMITED ("ERPM") WITHDRAWS PUMPING FROM ITS SOUTH WEST VERTICAL SHAFT**

DRDGOLD has announced that the ERPM mine of its 74% held subsidiary, DRDGOLD South African Operations (Pty) Limited at Boksburg on South Africa's East Rand will discontinue pumping of underground water at the mine's South West Vertical Shaft today.

ERPM's South West Vertical Shaft has been used for some time to manage the rising water level on the Central Witwatersrand Basin. Some 60 megalitres of water is pumped daily from a depth of approximately 1 000 metres.

The decision to cease pumping follows the death of two employees underground at the South West Vertical Shaft on Friday, 19 September 2008. Post mortems suggest that the two men, who had been conducting routine water level measurements, died of asphyxiation. South West Vertical Shaft has been used only for water pumping purposes for several years.

The Department of Minerals and Energy issued a Section 54 notice, in terms of the Mine Health and Safety Act, subjecting access into the area to certain restrictions and conditions relating to ventilation.

Over the next two weeks, ERPM will examine how the cessation of pumping will affect the rest of its operations.
